# Faber Fantasticus

Leadership and dealing with stress

It is one thing to understand communication tools in theory, but being able to actually use them in dynamic workplace situations is quite another.

With our interactive platform you can practise clear communication, precise goal-setting and dealing with risk, also when working under pressure.

“Faber Fantasticus” offers you the ideal setting to learn about, to use and to reflect on goal-oriented communication tools.

The head of the car manufacturer “Faber Fantasticus” is extremely grumpy. The move to “Just in Time Production” has led to stuttering production.

The inevitable consequence: all sites have to communicate better with each other. And not only that, all processes have to be rewritten from scratch and all points of contact have to be defined and put into practice.

Four sites are joined together by a railway circuit. The logistical processes need optimising to make sure that train crashes are avoided!

Moreover, you need to keep market conditions and profitability in mind. What differentiates the most lucrative jobs from the rotten eggs? And what are your competitors up to?

Target group: Executive managers, operational managers and their teams

Main focus: Communication in highly dynamic situations, leadership behaviour under stress

Group size: 5 – 100 people

Time needed: 2 to 4 hours

The “Faber Fantasticus” interactive platform can be delivered as a stand-alone training event but also combines perfectly with the other modules in our programme (see reverse).

*“The simulation was fascinating. I saw how quickly we forget about good communication when we are in a rush, and learned what simple tools can help with this.”*

Participant, Carl Zeiss AG, Germany

*“The parallels with everyday life in the clinic are striking. I saw how consistent use of actually quite straightforward communication tools can really improve patient safety.”*

Participant, Vestische Kinder- und Jugendklinik, Datteln, Germany

InterPersonis

InterPersonis specialises in enhancing the skills of employees, teams and companies within high reliability organisations and high tech sectors for their everyday challenges. We especially focus on safety and dealing with risks. We utilise our many years of work experience, modern training methods and the newest findings from science and practice. Our trainers are from international aviation and are active airline pilots. They have comprehensive experience in training, in operative leadership, in management and in working responsibly with employees. The team is complemented by industrial psychologists and trainers. Since its foundation in 2007, InterPersonis has been working successfully with companies and organisations from many sectors, including the nuclear industry and medicine.
